

Trisha Minahan has always been deeply concerned about the environment. With a degree in geology, she worked as a field geologist for an environmental consulting company where she concentrated on analyzing soil and groundwater contaminants linked to superfund sites.

In 1996, she changed careers to focus on education, and eventually merged the two by teaching AP Environmental Science at South High School in Torrance, California.

In her spare time, she enjoys playing hockey, hiking, and spending time with her family.
